TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, HTML5, CSS3, SCSS, Python
- **Frameworks & Libraries:** Angular (AngularJS–21), React, React Native, Next.js, Ionic, Flux, Redux, NgRx, RxJS
- **UI & Design Systems:** ag-Grid Enterprise, PrimeNG, Material UI, Bootstrap, Tailwind, Bulma, UI Design, Mockups/Prototyping
- **Architecture:** Nx Monorepos, Standalone Components, Component Store, Lazy Loading, REST APIs, Map Layer APIs, Component Libraries, Design Systems
- **Cloud, Backend & Tooling:** AWS (S3, API), Node.js, Express, Firebase, Postgres, Webpack, Azure DevOps, Git, npm, Yarn, SonarQube, Jira, Bitbucket, Atlassian, Google Analytics, Google Tag Manager
- **Testing & Quality:** Jest, Angular Testing Suite, Unit Testing, CI/CD, SonarQube, Checkmarx, Blackduck
- **Methodologies:** SAFe Agile, Scrum, Technical Leadership, Mentorship, Sprint Planning, Code Reviews
- **AI** - Claude Code, Claude Sonnet

PROFESSIONAL EXPERIENCE

FICO INC. | San Diego, CA

Lead UI Engineer | *Nov 2024 – July 2026*

- Served as lead frontend engineer for Analytics Workbench (AW), FICO's enterprise analytics platform used by data scientists to build, compare, deploy, and monitor predictive models.
- Led UI architecture and development for enterprise Angular applications using Nx, NgRx, TypeScript, and AWS.
- Delivered one of the largest and most technically complex features in Analytics Workbench history: Analyses Factory (**Score Comparison Analysis)** .
- Built scalable Angular applications using standalone components, state stores, RxJS, lazy loading, and reusable UI architecture.
- Led Angular 17–21 modernization, upgrading ag-Grid Enterprise, the internal design system (IRIS), and many other npm packages across a monorepo.
- Eliminated all high-severity CVEs while reducing dependency override.
- Designed analytics dashboards with ag-Grid Enterprise, D3, and Chart.js.
- Developed asynchronous workflows utilizing AWS S3 and REST APIs.
- Improved code quality through SonarQube, Blackduck, and CheckMarx remediation. Additional improvements using code reviews and Angular best practices.

BAE SYSTEMS INC. | San Diego, CA
Software Engineer II | *January 2019 – April 2024*

- Served as core frontend engineer for the Geospatial Exploitation Platform (GXP), building scalable UIs, components, and map layer integrations using **React**, **Material UI**, and NPM ecosystem tools.
- Maintained and extended Node.js middleware services, proxy servers, and REST API integrations to bridge frontend clients with backend data streams.
- Engineered comprehensive unit test suites using **Jest** to ensure strict delivery quality and platform reliability for high-consequence enterprise clients.
- Managed team tasking and sprints within Azure DevOps; led daily stand-up meetings to unblock technical roadblocks, conducted sprint planning, and oversaw pull requests to enforce code quality.
- Mentored new engineering hires throughout onboarding to accelerate codebase familiarity, development workflows, and platform expertise.

DILLARD'S INC. | Little Rock, AR
UX Front End Developer | *January 2016 – December 2018*

- Streamlined internal operations across Store Planning, Marketing/Advertising, and the Photo Studio by architecting single-page web applications (SPAs) in **AngularJS** and **Angular**.
- Modernized the enterprise careers platform by building a custom, in-house job posting engine and feeder app, eliminating dependency on third-party services.
- Executed multi-phase framework migrations (jQuery > AngularJS > Angular) to modernize legacy enterprise applications.
- Built a cross-platform mobile app for the photo studio using **Ionic**, successfully phasing out legacy hardware scanner guns.
- Designed UI mockups and interactive prototypes throughout the SDLC using **Balsamiq**.
- Integrated frontend interfaces with backend services via REST APIs and verified quality standards by authoring unit tests using Angular's native testing suite.

PROJECTS

ROAST MY COFFEE HOUSE *(iOS, Web, Android)*
Cofounder & Tech Lead

- Led stack architecture, application development, and performance optimization for a hybrid cross-platform application using **Ionic** and **Angular**.
- Implemented **Firebase** services for user authentication, firestore, database, hosting, and cloud functions to support live local coffee roaster discovery and review features.

Rune Tools (https://rune-tools.com)

- Designed and developed an Old School RuneScape (OSRS) lookup application to provide players with fast access to character-related information through a streamlined web interface.
- Built a responsive frontend experience for searching and displaying OSRS data, focusing on usability, reusable components, and efficient data retrieval.
- Integrated external game data APIs to dynamically retrieve and present up-to-date OSRS information.
- Applied modern TypeScript and Angular development practices to create a maintainable, scalable application architecture.

VOLUNTEER & COMMUNITY LEADERSHIP

COMIC-CON INTERNATIONAL | San Diego, CA
Programming Department Volunteer

EDUCATION & CERTIFICATIONS

- **Bachelor of Science (BS) in Computer Science**
  University of Arkansas - School of Engineering, Fayetteville, AR
- **Certifications & Clearances:**
  - **Top Secret / SCI Security Clearance**
  - **SAFe Agile Certification** | Leading Agile – Scrum Master Training
  - **Angular Architecture & RxJS Workshops** | Angular Mix Conference
  - **Complete Data Structures and Algorithms in Python Bootcamp** | Udemy
